AMENDMENTS TO THE CLAIMS:

Please cancel claim 6 without prejudice or disclaimer, amend 1, 2, 7, 8, 16, 18 and 19, and add new claims 20-23, as follows. This listing of claims will replace all prior versions, and listings, of claims in the application:

Listing of Claims:

Claim 1 (Currently amended): A canister for preventing <u>vehicle</u> fuel vaporization, <u>comprising:</u>

<u>a case containing</u> in which a latent-heat storage type adsorbent composition for canisters is placed in a canister case,

the <u>latent-heat storage type adsorbent</u> composition comprising an adsorbent and a heatstorage material;

the adsorbent being in the form of granules or powder having pores, and being capable of adsorbing vehicle fuel vapor,

the heat-storage material comprising a microencapsulated phase-change material, the phasechange material absorbing or releasing latent heat in response to temperature change, wherein

the average particle diameter of the heat-storage material is about 1/1000 to about 1/10 of that of the adsorbent,

the average particle diameter of the adsorbent is about 1 μ m to about 10 mm, the average particle diameter of the heat-storage material is about 0.1 to about 500 μ m, the specific surface area of the adsorbent is about 500 to about 2500 m²/g,

Reply to OA dated August 24, 2009

the diameter of the micro pore pores of the adsorbent is about 10 Å to about 50 Å, and the content of the heat-storage material is about 10 to about 100 parts by weight based on 100

parts by weight of the adsorbent,

wherein the heat-storage material is adhered to and/or deposited on the surface of the

adsorbent.

Claim 2 (Currently amended): A canister for preventing vehicle fuel vaporization according

to Claim 1, wherein the adsorbent is activated carbon, activated alumina or a mixture thereof.

Claims 3-6 (Canceled).

Claim 7 (Currently amended): A canister for preventing vehicle fuel vaporization according

to Claim 1, wherein the latent-heat storage type adsorbent composition is in a form of a molded

article comprising the composition and a binder.

Claim 8 (Currently amended): A canister for preventing vehicle fuel vaporization according

to Claim 7, wherein the molded article is in at least one shape selected from the group consisting of

pellet, disc and block.

Amendment filed December 11, 2009

Reply to OA dated August 24, 2009

Claim 9 (Withdrawn): A method for producing a latent-heat storage type adsorbent

composition for canisters according to Claim 1 wherein the heat-storage material is adhered to

and/or deposited on the surface of the adsorbent.

Claim 10 (Withdrawn): A method for producing a latent-heat storage type adsorbent

composition for canisters according to Claim 1 wherein the heat-storage material is electrostatically

adhered to and/or deposited on the surface of the adsorbent.

Claim 11 (Withdrawn): A method for producing a latent-heat storage type adsorbent

composition for canisters according to Claim 1 wherein the heat-storage material and the adsorbent

are uniformly mixed.

Claim 12 (Withdrawn): A method for producing a latent-heat storage type adsorbent

composition for canisters according to Claim 1 wherein a slurry obtained by suspending the heat-

storage material in a liquid medium is mixed with the adsorbent, and the mixture is then dried.

Claim 13 (Withdrawn): A method for producing a latent-heat storage type adsorbent

composition for canisters comprising:

-4-

suspending a heat-storage material containing a microencapsulated phase-change material

in a liquid medium to give a slurry, the phase-change material capable of absorbing or releasing

latent heat in response to temperature change, and

spraying a liquid mixture containing the slurry and, if necessary, a binder, on the surface of

the fuel vapor adsorbent.

Claim 14 (Withdrawn): A method for producing a latent-heat storage type adsorbent

composition for canisters comprising:

molding a heat-storage material containing a microencapsulated phase-change material

capable of absorbing or releasing latent heat in response to temperature change to produce a molded

article, and

uniformly mixing a fuel vapor adsorbent and the molded article.

Claim 15 (Withdrawn): A method for producing a latent-heat storage type adsorbent

composition for canisters comprising:

uniformly mixing a fuel vapor adsorbent, a powdery heat storage material containing a

microencapsulated phase-change material capable of absorbing or releasing latent heat in response

to temperature change or a slurry suspending the powdery heat storage material in the liquid medium,

a binder and water, and

molding the resultant mixture to form a desired shape.

U.S. Patent Application Serial No. 10/516,941

Amendment filed December 11, 2009

Reply to OA dated August 24, 2009

Claim 16 (Currently amended): A canister for preventing vehicle fuel vaporization according

to Claim 1, wherein the latent-heat storage type adsorbent composition for canisters is obtained by

a method comprising:

suspending the heat-storage material in a liquid medium to give a slurry, and

spraying a liquid mixture containing the slurry and, if necessary, a binder, on the surface of

the vehicle fuel vapor adsorbent.

Claim 17 (Canceled).

Claim 18 (Currently amended): A canister for preventing vehicle fuel vaporization according

to Claim 1, wherein the latent-heat storage type adsorbent composition for canisters is obtained by

a method comprising:

molding a heat-storage material to produce a molded article, and

uniformly mixing the adsorbent and the molded article.

Claim 19 (Currently amended): A canister for preventing vehicle fuel vaporization according

to claim 1, wherein the latent-heat storage type adsorbent composition for canisters is obtained by

a method comprising:

-6-

uniformly mixing a <u>vehicle</u> fuel vapor adsorbent, the heat storage material, the heat storage material being a powder or a slurry suspending the powdery heat storage material in the liquid medium, a binder and water, and

molding the resultant mixture to form a desired shape.

Claim 20 (New): A canister for preventing vehicle fuel vaporization, comprising: a case containing a latent-heat storage type adsorbent composition,

the latent-heat storage adsorbent composition comprising an absorbent and a heat-storage material;

the adsorbent being in the form of granules, powder or pellets having pores, and being capable of adsorbing vehicle fuel vapor,

the heat-storage material comprising a microencapsulated phase-change material, the phasechange material absorbing or releasing latent heat in response to temperature change, wherein

the average particle diameter of the heat-storage material is about 1/1000 to about 1/10 of that of the adsorbent,

the average particle diameter of the adsorbent is about 1 μ m to about 10 mm, the average particle diameter of the heat-storage material is about 0.1 to about 500 μ m, the specific surface area of the adsorbent is about 500 to about 2500 m²/g, the diameter of the pores of the adsorbent is about 10 Å to about 50 Å, and

Reply to OA dated August 24, 2009

the content of the heat-storage material is about 10 to about 100 parts by weight based on 100

parts by weight of the adsorbent,

wherein the latent-heat storage type adsorbent composition for canisters is obtained by a

method comprising:

molding a heat-storage material to produce a molded article, and

uniformly mixing the adsorbent and the molded article.

Claim 21 (New): A canister for preventing vehicle fuel vaporization according to claim 20,

wherein the adsorbent is activated carbon, activated alumina or a mixture thereof.

Claim 22 (New): A canister for preventing vehicle fuel vaporization according to claim 20,

wherein the latent-heat storage type adsorbent composition is in the form of a molded article

comprising the composition and a binder.

Claim 23 (New): A canister for preventing vehicle fuel vaporization according to claim 20,

wherein the molded article is in at least one shape selected from the group consisting of pellet, disc

and block.
